

I'm an independent developer based in the Philippines who has always been self-motivated and driven since my early academic years. This self-motivation has enabled me to go beyond the college curriculum and acquire knowledge outside the standard offerings through self-learning, freelancing and personal projects.

Experience

Full-Stack Developer	Vauch Philippines (freelance, part time)	April 2023 - January 2024
- Transformed Figma designs into fully functional interfaces using React, TypeScript, and Tailwind CSS. - Developed highly scalable CRUD APIs in NextJS using TRPC. - Implemented unit tests in Jest to help catch bugs early in the development process. - Collaborated closely with founders, contributing to strategic planning and implementing key features. - Integrated with PlanetScale (MySQL) and utilized Prisma as the ORM of choice. - Implemented user authentication and access control with NextAuth. - Implemented Zustand for efficient centralized state management, enhancing the maintainability of the application. <u>Utilized</u>: TypeScript, NextJS, Tailwind, Prisma.		

Projects

Creator Solo Developer	Axie Managers IO	August 2021 - August 2022
- Built & Launched a simple community-loved web-based dashboard for an NFT gaming community and amassed 160k+ users according to Google Analytics. Monetized through Coinzilla Ads. - Developed a front-end application using React and TypeScript, integrating seamless local storage persistence and responsive design principles for an enhanced user experience. - With the official game API not providing historical data, I used Golang to build a worker that concurrently fetches the official game API daily. - Used postgres for data storage and redis for caching to reduce database load. - Deployed the Go API and worker using docker on a digital ocean droplet and used caddy as a reverse proxy to automatically provide an SSL certification. <u>Utilized</u>: React, TypeScript, Golang, PostgreSQL, Redis, Docker, Caddy.		

Creator Solo Developer	Cute Notch	January 2025 - March 2025
- Designed and developed a macOS application that brings the Dynamic Island experience to MacBooks. - Implemented real-time music playback controls for Spotify and Apple Music using AppleScript, enabling song tracking and playback management directly from the interface. - Built the app frontend using React + TypeScript, bundled with Tauri for lightweight, performant integration. <u>Utilized</u>: Tauri, React, TypeScript, AppleScript.		

Education

Bachelor of Science in Computer Science, ACLC College of Ormoc.	2022 - April 2026
Coursework: Java, HTML, CSS, JavaScript, NodeJS, ReactJS, MySQL, MongoDB, Express. Recognition: Dean's lister, lead programmer of the year, outstanding CS of the year.	
TVL, ICT - Computer Programming, ACLC College of Ormoc.	2019 - 2021
Coursework: Java, Java Swing, HTML, CSS, JavaScript, PHP, MySQL. Recognition: Academic excellence, best in work immersion, best in programming, with high honors.
